/4 cont./

131 Thus formerly the Chiriguano territory in the north was contiguous with the province of Sara, in the south and southwest with Argentina and the city of Tarija, in the west with Tarabuco country, and in the east with the colony of Carandaiti. According to its former boundaries, it then included an area of 200 leagues from north to south and southwest, and more than 90 leagues west to east.

131 • 16 [648] Today this extensive territory has been much reduced because of emigration, caused in part by the whites, under whose dominion most of them will not resign themselves to staying; the plagues which decimate the race have a powerful influence on its further reduction, and very soon /5/ barely the 131 name will remain. Today to the north it scarcely reaches Abapó, to the south, Itiyuru de Yacuiba, to the west, Monteagudo, and to the east, Carandaiti, some hundred leagues from north to south and about 40 from west to east.

131 648 [433] Formerly it embraced several degrees of latitude and three and a half of longitude; as they lost a considerable part of this area, so will they end up by losing it all, for despite their being heirs to the country which God had given them, as one of them was saying to me not long ago, they do not know how to farm it and improve their agriculture; they prefer to go far away and work for others rather than to own land at home. This very day only a few leagues remain in the hands of the Indians, Caipipendi in the province of Cordillera, Gutierrez Canton, and all the territory occupied by the missions, but both are likely to pass into foreign hands, because in fact the Indian is incapable of making the land that he does possess bear fruit; then the few survivors in the territory will be servants in their own house, as are so many others in lands that were once their own.

341 134 [132] The land is very unstable, at least that now occupied; it lacks stone and gravel, and since in their season the rains are torrential, they easily open cracks which in a few years become wide, deep ravines. Contributing a great deal to this are the cattle, which, because of their weight, stir up the land with their hoofs more than other livestock; for this reason
